

ONE WORLD OF DIAMONDS – ONE SOURCE OF TECHNOLOGY

FIRETRACE™ Light Trace Analyzer

As the consumers become more familiar about Diamond Cut Grades, their buying decision relies mainly on the Fire, Scintillation and Brilliance of the diamond. OGI's research team has developed the FireTrace, an instrument that determines how much "fire" a diamond spread. In addition, our mathematical algorithms visually simulate a diamonds light – reflecting properties

- BRIGHTNESS.....** White light reflected through the top of the diamond.
- FIRE.....** Colored light reflected from within the diamond.
- SCINTILLATION..** Intense sparkles in the diamond when it moves.

- Measure Fire, Brightness and Scintillation of the measured diamond
- Measure light Intensity
- Measurement results from the FireTrace can be printed on an elegant plastic card
- OGI's FireTrace technology sets new standards in the diamond world
- Available combined with the Megascop software, the leading proportion analyzer software
- Include FireTrace Pro
