

DiaTrue

Detects CVD/HPHT/Moissanite/CZ

OGI has launched the Diatrue technology, which is the best detector system for every type of Lab-Grown diamonds including CZ and Moissanite.

Important to note, Diatrue is the first device to detect lab grown CVD, HPHT, CZ, and Moissanite all in one scan!

The entire market is reluctant to mix natural diamonds with lab grown diamonds. Therefore, all the devices in the market succeed at some level to identify the differences but the majority fail to identify CZ stones, which is a serious problem.

When you mix a parcel made of a third-quarter of natural diamonds and a quarter of CZ stones, most detecting devices show the parcel as a natural diamond, which is an enormous loss in the actual value of the diamond for the client.

- Diatrue can detect multiple stones at a time.**
- It identify unmounted diamonds in parcel and diamonds in a jewelry.**
- Diatrue instantly detects CVD and HPHT lab grown diamonds.**
- You can use Diatrue when buying diamonds, taking in jewelry.**
- With Diatrue, you can protect your customers when selling jewelry or diamonds.**
- Diatrue will upgrade your credibility with your customer.**
- It comes with a 11" tablet that shows the results super clearly.**
- The large screen is excellent for stores which want to make their clients more confidence of what they are buying.**
